

JOIN US AT SMART CITY HUB #4

Theme: 'The power of data: creating more liveable cities'

Date: Thursday, June 7, 2018

Time: 5 PM - 8 PM

Place: DTU, DTU Library, Building 101D

Anker Engelds Vej, 2800 Kgs. Lyngby

What is 'Smart City Hub'?

'Smart City Hub' is an informal platform for the development of Smart City projects and solutions by using data. The hub creates collaborations, meetings and solutions across students, businesses, researchers and municipalities - all working with urban planning, data, innovation and soft- & hardware on a technical and/or at business level.

Can data create more liveable cities?

Join the Smart City Hub #4 where Lyngby-Taarbæk Municipality will present a specific challenge, and you'll get the chance to co-create and come up with good ideas on how to combine relevant data in order to 1) create more liveable cities, 2) design and rethink a new interactive user friendly city platform with relevant activities and information, 3) get the latest news on Smart City trends and Big Data.

How does it work?

'Smart City Hub' is continuing in 2018 after a successful series of hubs in 2017. In each hub a relevant Smart City theme such as 'Smart Supply', 'Smart Buildings' or 'Smart Mobility' will be presented by experts. Everyone can join the hub and contribute with e.g. data, ideas, skills, tools or resources. The hub is facilitated in order to create an innovative, exciting and creative process.

What's in it for you?

In the hub you will encounter new Smart City thinking and use your competencies when working with other stakeholders. Perhaps you need some new inspiration? A collaborator for your bachelor/masters project? Or a new business partner? 'Smart City Hub' is where you will find it.

Programme for June 7, 2018:

17.00-17.10: Welcome and introduction to 'Smart City Hub'

17.10-17.30: Available city data and focus on how to combine data to create user friendly information about the city.
by Jakob Sylvest, Lyngby-Taarbæk Municipality

17.30-18.10: 1st hack: How can data create more liveable cities?

18.10-18.30: Refreshments

18.30-18.50: Trends on Big Data and Smart Cities
by Bjarne Kjær Ersbøll, DTU Compute

18.50-19.30: 2nd hack: What is needed for cities to succeed with the Smart City agenda?

19.30-20.00: Recap of the discussions and networking
